

“

Used by large and small scale equipment rental companies to protect their customers on the jobsite, Large-scale operations and expansion imply more equipment, more customers, more costs, and more accidents. Equipment companies need to control individual access to their machines, not sets of identical keys.

...So Get UKey!

for Rental Fleets

The Ukey Keyless Security and Access Device is designed for Rental Fleets, contractors, and equipment owners. Ukey can be installed on all types of equipment from concrete buggies to earthmovers and everything between.

It eliminates painful ignition key management that is common in the rental world. When you install the Ukey System in a piece of equipment, it becomes unique to your rental fleet. Says Danny Abshire, founder and inventor of the patented Ukey System.

The product was first developed in 2001 after encountering key access issues for large rental fleets, eliminating the original keyswitch and replacing it with a keypad. We developed it for use on everything, not just one type or voltage equipment, it simply works. Over the years, Ukey was challenged with unique applications and over came them with a solution. For instance, it accommodates machines with glow plug or chokes for cold engines. Ukey also has a kit for Aerial Work Platforms, one of the most needed machines for safety and security. It features a smart keypad that converts it to a different configuration. You can use the same Ukey system on all types of machines, and only change the keypad to convert it to an AWP machine.

Today, Ukey is successfully used on Rental Fleets without the the need of monthly monitoring that GPS systems require. It simply keeps people off of your equipment at the jobsite, where things happen. Ukey has a proven record used in several rental fleets, protecting customers from damages after they leave the jobsite, something they are responsible for. Many times discrepancies take place as in “I off rented that equipment a week ago” and “now you are charging me for the fuel tank being empty or a flat tire?” Sometimes customers are lost due to everyone on the jobsite having keys to the same type of use the other machines. Many times the #1 enemy to rental contractors are job superintendents and other contractors. An electrical contractor leaves the jobsite at 3:30pm and 3:45pm the plumbers grab their machine, using their fuel, creating tire damages, and even accidents on jobsites. None of these events are good for your customers. The Ukey System solves all of these issues.

Ukey Features:

- No more lost keys expense
- No more need to deliver replacement keys
- No more need to charge customers for lost keys on rental returns
- No more need to replace damaged keyswitches
- Customizable code scheme for your fleet
- Store codes on the rental contract (use last 4 digits of contract)
- Change the code in seconds during rental make ready.
- Increase customer retention thru less damages and peace of mind
- Get Ukey today and start experiencing the difference!
